

*EDI Message Specification- Direct Debit Message*  
(EDIFACT D.96A - DIRDEB)  
Version 3.6.

Change log

Date	Version	Changes
16.04.2009	3	Description updated
24.02.2010	3.1	INP-segment: C15 = SE In-payment form (OCR). C15 has been changed to C16 instead.
18.01.2010	3.2	FII-segment in LIN-group: Clarified description for collection type 'Reversal via account transfer'
29.08.2012	3.3	Changed the name of PBS to Nets
19.07.2013	3.4	C08 about reversal via DK Direct Debit (Betalingsservice) updated with information about a transaction limit and limited access to service.
27.11.2013	3.5	SE e-invoice B2C (e-faktura) removed. FI, IE, DE Direct Debit is not supported by Danske Bank anymore.
18.10.2022	3.6	Document reviewed and updated

## 1. Introduction

This specification provides the definition of the Direct Debit message (DIRDEB) to be used in Electronic Data Interchange (EDI).

These guidelines are broad. To see how the message should look with particular message types, see EDI Message Examples.

## 2. Scope

### 2.1. Functional Definition

A Direct Debit message is sent by the Creditor to the Creditor's Bank, instructing it to claim specified amount(s) from the Debtor(s) and to credit the amount(s) to an account specified in the message, which the Creditor's Bank services for the Creditor in settlement of the referenced transactions.

Throughout this document, the term 'Creditor' refers to either a Beneficiary or a Payee, likewise the term 'Debtor' refers to either an Ordered Customer or a Payer.

Prior to the Direct Debit procedure, some agreement(s) would usually have been concluded:

- An agreement between the Creditor and his Bank (mainly to specify the conditions of credit and the kind of direct debit).
- A mandate (as an agreement) between the Debtor and the Debtor's Bank or between the Debtor and the Creditor.

### 2.2. Field of Application

This message may be applied for both national and international settlements, but it is based on national rules for the debit side. National Direct Debits can be made in Denmark, Sweden, Norway and Poland.

Within the scope of the Direct Debit message it is possible to claim (collect) an amount from the Debtor in several ways (channels):

- by automatic Direct Debit through local debiting systems with or without advice to Debtor
- by a traditional paper based invoice with a In-payment form (FIK/GIK/KID/OCR reference) with advice to Debtor
- by an e-invoicing service

The following Direct Debit systems are supported:

- DK Direct Debit (Betalingsservice and LeverandørService)
- SE Direct Debit (Autogiro)
- NO Direct Debit (AvtaleGiro and Autogiro)
- PL Direct Debit
- UK Direct Debit

NO e-invoice B2C (eFaktura) is not supported

### 2.3. Principles

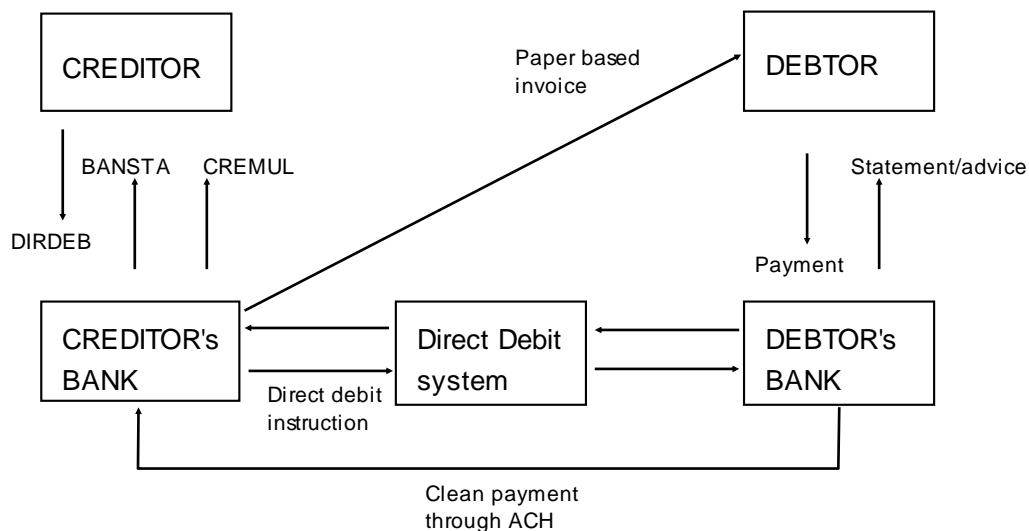

- A Direct Debit message may cover the financial settlement of one or more commercial trade transactions.
- Several credit accounts, channels, execution dates and currencies may be specified.
- The only way to modify a Direct Debit message is to cancel the whole message or part thereof (e.g. by the use of the FINCAN message). In that respect, one to many transactions could be cancelled within the message, avoiding being obliged to cancel the whole message. The cancellation is dependent upon the processing of the message.
- As an acknowledgement of receipt the Creditor can receive a CONTRL as acknowledgement.
- For automatic reconciliation purposes the payments processed will be listed in a Multiple Credit Advice (CREMUL) with reference numbers, if any. If any Direct Debits are rejected, these will be listed in the Bank Status message (BANSTA) sent by the bank to the customer. BANSTA will only be sent if ordered in the DIRDEB.
- Duplicate checking is possible through rejection of previously received technical references; for the debit entry (CR3). This reference is optional and its absence will inhibit this check.

### 2.4. Rejections

- The whole interchange will be rejected if there is an error that affects the whole interchange e.g. synt ax, header or trailer errors.
- An error at the application level on the credit side (level B) will affect all the C's which will be rejected.
- Individual debits will be rejected at the application level e.g. if the account number is incorrect.

### 2.5. Relation to other messages

The following messages are sent between the involved parties dependent on the type claim (collection).

All initial messages are acknowledged by the recipient using the CONTRL message.

### 3. Message definition

#### 3.1. EDIFACT structure

An EDIFACT interchange can hold one or more messages. To be able to separate data in logical levels within the interchange a set of service segments are used. Service segments all have "UN" as the first two characters in their name.

UNA:                    Specification of syntax separators.  
 UNB and UNZ:        Start and termination of interchange.  
 UNH and UNT:        Start and termination on message.

Data segments contain business information in code or free text. A message is build from data segments , which all together constitute the contents of the message. The Branching Diagram defines which segments a message is constituted of and the order in which they appear.

#### 3.2. Data Segment Clarification

This section should be read in conjunction with the Segment Specification, which indicate mandatory, conditional and repeating requirements of segments, composite data elements and simple elements.

The following semantic principles applying to the message are intended to facilitate the understanding of the message:

The Direct debit message is structured in three levels: A, B, and C.

- A level contains data related to the whole message and is contained in Segment Group 1 through Segment Group 3 and the Heading section.
- B level contains data from the credit side (one credit account, one currency, one execution date) and data which applies to all further details of C level(s) and is contained in Segment Group 4 through Segment Group 10.
- C level contains mainly data related to the debit side, and this data is considered as unique for each debit transaction and is contained in Segment Group 11 through Segment Group 23.

The structure of the message is designed to allow several B levels, each B level being followed by its related C levels. The last level C segment is followed by the termination part of level A.

## 4. Segment specification

### 4.1 Explanation

The Segment Table contains the following columns:

Tag	Name	S	Format	Description
Column 1	Gives the UN/EDIFACT tag number of the composite data element or simple element.			
Column 2	Gives the name of the composite data element or simple element.			
Column 3	Status indicator. Indicates whether the field (in the Danish interpretation) is: M = Mandatory, i.e. the field is defined as 'must be used.' C = Conditional, i.e. the field is defined as conditional. N = Not used, i.e. no business requirement for the field has been identified.			
Column 4	Indicates the format and maximum length of the field: a = alphabetic n = numeric an = alphanumerical (“a” and/or “n” followed by number represents fixed length of the value “a” and/or “n” followed by “..” and number represents a variable length up to the max limit)			
Column 5	Gives description of business interpretation and possible codes or values to be used in the field when used with Danske Bank.			

### 4.2. Segment tables

The rest of this section describes each of the segments in this message.

Tag	Name	S	Format	Description
UNA	C 1		Level A	UNA
Syntax information				
Description	A service segment defining the characters used as delimiters and indicators in the rest of the interchange.			
UNA				
	Composite data element separator	M	an1	Defines separator between each data element within a composite data element. Colon (:) is recommended.
	Data element separator	M	an1	Defines separator between data elements and composite data elements. Plus (+) is recommended.
	Decimal notation	M	an1	Comma (,) is recommended.

	Escape character	M	an1	Cancels the value or meaning of the following character. Question mark (?) is recommended.
	Reserved	M	an1	Blank.
	Segment terminator	M	an1	Specifies the end of a segment. Apostrophe (') is recommended.

Example: UNA:+,?'

UNB	M	1	UNB
Interchange header			

Description: Segment identifying the interchange, character set, sender and receiver.

Tag	Name	S	Format	Description
UNB				
S001	Syntax identifier	M		Character set specification.
0001	Syntax identifier	M	a4	UNOC = 8 bit ASCII character set containing special Danish characters
0002	Syntax version number	M	n1	Character set specification. 3 = ISO 9735, 1991-version.
S002	Interchange sender	M		Sender identification.
0004	Sender identification	M	an..35	Agreed.
0007	Identification qualifier, coded	C	an..4	Sender identification type. 14 = EAN number. ZZ = Mutually agreed.
0008	Internal sub-address	C	an..14	Not used.
S003	Interchange recipient	M		
0010	Recipient identification	M	an..35	Receiver identification. Danske Bank is identified by the relevant network operators as: 5790000243440 = Danske Bank's EAN number. DKDDB.DDB004 = Danske Bank's identification on IBM GN.
0007	Identification qualifier, coded	C	an..4	Sender identification type. 14 = EAN number. ZZ = Mutually agreed.
0014	Internal sub address	C	an..14	Not used.
S004	Time for creation of segment	M		
0017	Segment creation date	M	n6	Format YYMMDD.

0019	Segment creation time	M	n4	Format TTMM.
0020	Interchange reference number	M	an..14	Unique reference number for each sender in a 3 month period.
S005	Recipients reference/password	C		Identification used for access in receivers system.
0022	Receivers reference/password	M	an..14	User number provided by the Bank. This number represents the user – that is, the operator. The number allows the user to access the Bank's systems.
0025	Receivers reference/password, coded	C	an2	Z1 = User number.
0026	Application reference	C	an..14	Application reference. DBTS96A = For using the 96.A directory.
0029	Priority	C	a1	Not used.
0031	Request for acknowledgement	C	n1	Request for an EDIFACT syntax acknowledgement (CONTRL). 1 = Acknowledgment is requested. 0 or blank = Acknowledgment is not requested.
0032	Interchange agreement, identification	C	an..35	Agreement number provided for Danske Bank Collection Service.
0035	Test indicator	C	n1	Specifies that the interchange is a test and that the debits included should not be booked. The validation will be carried out. 1 = Test.

Example: UNB+UNOC:3+TEST:ZZ+5790000243440:14+030129:1036+1747+123456:Z1+DBTS96A++1+271114'

UNH	M	1	Level A	UNH
Message header				

Description A service segment starting the message, uniquely identifying the message and specifying the message type and version The message type code for the Direct Debit message is DIRDEB.

Tag	Name	S	Format	Description
UNH				
0062	Message reference number	M	an..14	Identification of the message by a unique reference number. Data element 0062 in the UNT segment must have the same value.
S009	Message identifier	M		Specification of message type being sent, followed by the version and release number.
0065	Message type identifier	M	an..6	Identification of the EDIFACT message type. DIRDEB = Direct debit
0052	Message type version	M	an..3	Identification of the EDIFACT message version. D = Directory
0054	Message type release	M	an..3	Identification of the release number 96A = Release 96 A

0051	Controlling agency	M	an..2	Specification of responsible agency. UN = United Nations
0057	Association assigned code	C	an..6	Not used
0068	Common access reference	C	an..35	Not used
S010	Status of the transfer	C		This composite element is not used.
0070	Sequence message transfer number	M	an..2	
0073	First/last sequence message transfer indication	C	a1	

Example: UNH+1+DIRDEB:D:96A:UN'

BGM	M	1	Level A	BGM
-----	---	---	---------	-----

Beginning of message

Description: A service segment used to indicate the type and function of a message and to transmit the identifying number of the entire message.

Tag	Name	S	Format	Description
BGM				
C002	Document/message name	C		Identification of the type of document/message by code or name.
1001	Document/message name, coded	C	an..3	Document/message identifier expressed in code. 447 = Collection order.
1131	Code list qualifier	C	an..3	Not used.
3055	Code list responsible agency, coded	C	an..3	Not used.
1000	Document/message name	C	an..35	Not used.
1004	Document/message number	C	an..35	Unique identification of the message.
1225	Message function, coded	C	an..3	Code indicating the function of the message. 9 = Original.
4343	Response type, coded	C	an..3	Code specifying the type of acknowledgement required or transmitted. AT = BANSTA (both positive and negative status). AB = Negative status message (BANSTA). AP1 = Positive status message (BANSTA).

Example: BGM+447+15423+9+AT'

DTM	M	1	Level A	DTM
-----	---	---	---------	-----

Date/time/period

Description: A segment specifying the date and if required the time when the message is created.

Tag	Name	S	Format	Description
-----	------	---	--------	-------------

DTM				
C507	Date/time/period	M		Date and/or time, or period relevant to the specified date/time/period type.
2005	Date/time/period qualifier	M	an..3	Code giving specific meaning to a date, time or period. 137 = Message date/time.
2380	Date/time/period	C	an..35	The value of a date, a date and time, a time or a period in a format as specified in DE/2379.
2379	Date/time/period format qualifier	C	an..3	Specification of the format in DE/2380. 102 = CCYYMMDD 203 = CCYYMMDDHHMM

Example: DTM+137:20030129:102'

BUS	C	1	Level A	BUS
Business function				

Description: A segment providing information related to the processing and purpose of the message.  
This segment is not used.

Tag	Name	S	Format	Description
BUS				
C521	Business function	C		
4027	Business function qualifier	M	an..3	
4025	Business function, coded	M	an..3	
1131	Code list qualifier	C	an..3	
3055	Code list responsible agency, coded	C	an..3	
4022	Business description	C	an..70	
3279	Geographic area, coded	C	an..3	
4487	Type of financial transaction, coded	C	an..3	
C551	Bank operation	C		
4383	Bank operation, coded	M	an..3	
1131	Code list qualifier	C	an..3	
3055	Code list responsible agency, coded	C	an..3	
4463	Intra-company payment, coded	C	an..3	

SG4	M	9999
-----	---	------

LIN-DTM-RFF-BUS-FCA-SG5-SG6-SG7-SG8-SG9-SG10-SG11

This segment group contains information regarding the credit side of the transaction and details which are pertinent to all Direct Debits specified within the group. Certain details may be provided either in this segment group or in segment group 11, but not in both.

This group defines certain criteria for the transactions within the group: credit account, date, currency of amount have to be the same.

Segment group 10 is not used.

LIN	M	1	Level B	LIN
Line item				

Description This segment identifies a line item uniquely within the message by a current line number.

Tag	Name	S	Format	Description
LIN				
1082	Line item number	C	n..6	Application generated number of the count of lines in a direct debit. This number starts with 1 in ascending order.
1229	Action request/notification, coded	C	an..3	Not used.
C212	Item number identification	C		This composite element is not used.
7140	Item number	C	an..35	
7143	Item number type, coded	C	an..3	
1131	Code list qualifier	C	an..3	
3055	Code list responsible agency, coded	C	an..3	
C829	Sub-line information	C		This composite element is not used.
5495	Sub-line indicator, coded	C	an..3	
1082	Line item number	C	n..6	
1222	Configuration level	C	n..2	Not used.
7083	Configuration, coded	C	an..3	Not used.

Example: LIN+1'

SG4	M	9999

DTM	C	1	Level B	DTM
Date/time/period				

Description: A segment specifying the date at which the order is requested to be executed or acted upon.

Tag	Name	S	Format	Description
DTM				
C507	Date/time/period	M		
2005	Date/time/period qualifier	M	an..3	Code giving specific meaning to a date, time or period. 203 = Execution date/time, requested. EKN = Requested execution day or following banking day. Direct Debit: The date where the amount has to be debited. Printed invoices: The date indicated as payment date.
2380	Date/time/period	C	an..35	The value of a date, a date and time, a time or a period in a format as specified in DE/2379.
2379	Date/time/period format qualifier	C	an..3	Specification of the format in DE/2380. 102 = CCYYMMDD

Example: DTM+203:20030129:102'

SG4	M	9999
LIN-DTM-RFF-BUS-FCA-SG5-SG6-SG7-SG8-SG9-SG10-SG11		

RFF	C	2	RFF
Reference			

Description: A segment specifying the reference of each single credit amount on the credit side of the transaction.  
This segment is not used.

Tag	Name	S	Format	Description
RFF				
C506	Reference	M		
1153	Reference qualifier	M	an..3	
1154	Reference number	C	an..35
